Risk Appetite - Examples

- University of Edinburgh is an excellent example¹
 - *Compliance – The University places great importance on compliance, and has no appetite for any breaches in statute, regulation, professional standards, research or medical ethics, bribery or fraud. It wishes to maintain accreditations related to courses or standards of operation, and has low appetite for risk relating to actions that may put accreditations in jeopardy*
 - *Financial - We will limit borrowing over 1 year to 35% of net assets except in exceptional circumstances approved by Court... We will deliver a minimum annual Operating Surplus of at least 2% of turnover over any three year period unless Court approves a specific alternative*

Eliciting Risk Appetite and Tolerance

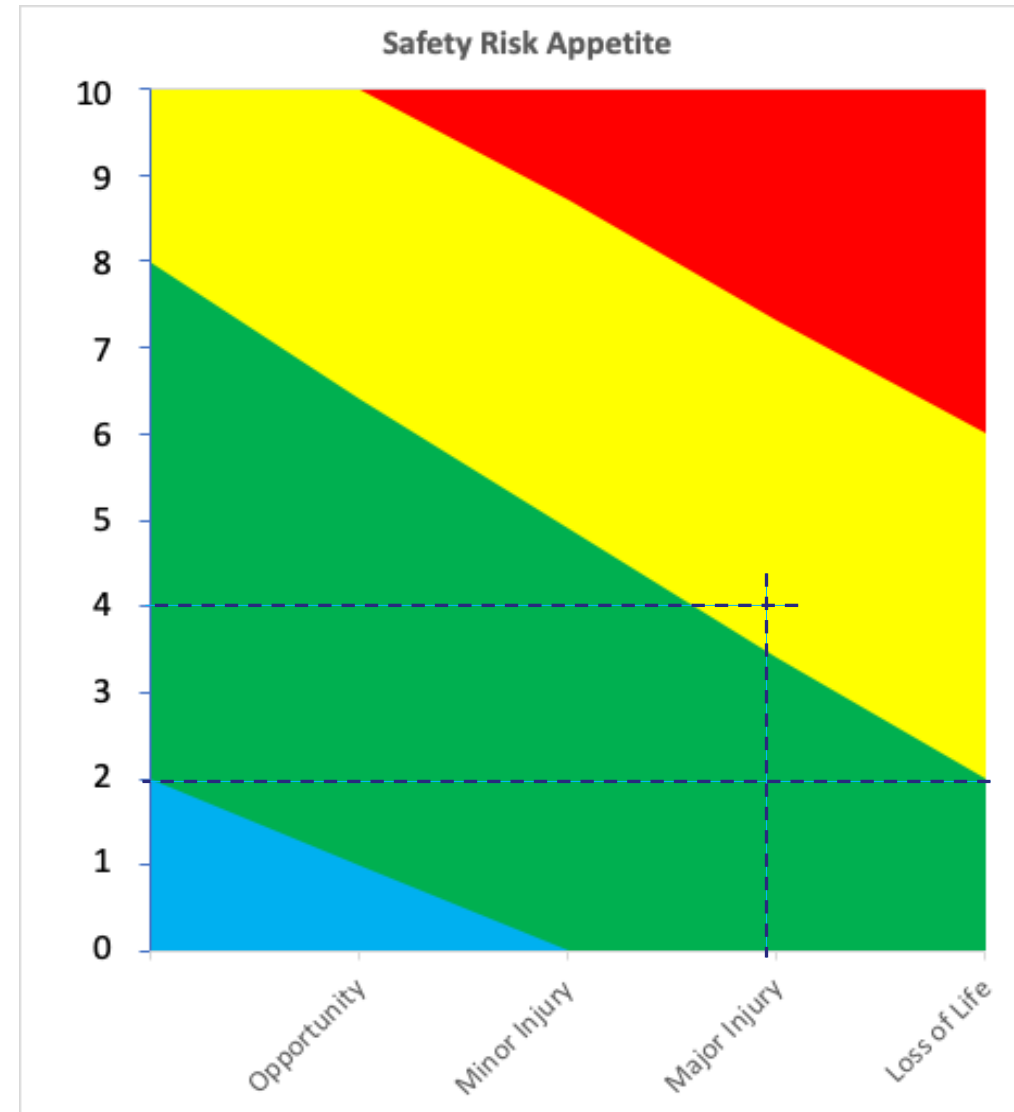

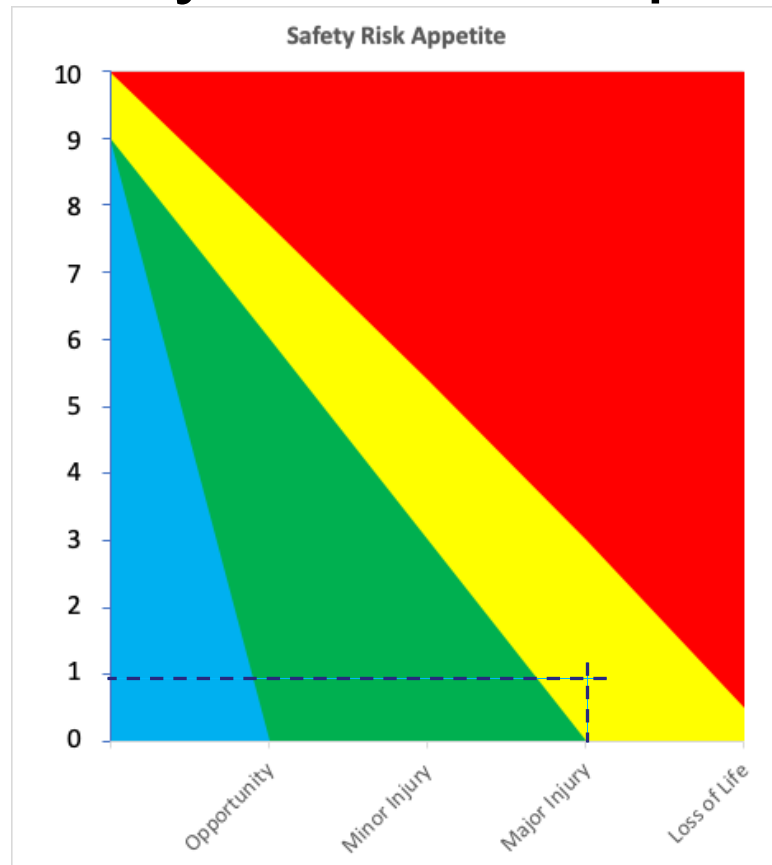

- How much is too much?
 - Pick a number between 1 and 1,000,000; lets use 209
 - Half the result set and ask
“Is our number greater than the lowest number?”
 - If No then half the result set again, and so on
 - If Yes then ask
“Is our number greater than the highest number?”
 - It takes three iterations to determine that our number is between 122 and 244
 - 100,000,000 only requires 1-2 more iterations

Risk Policy

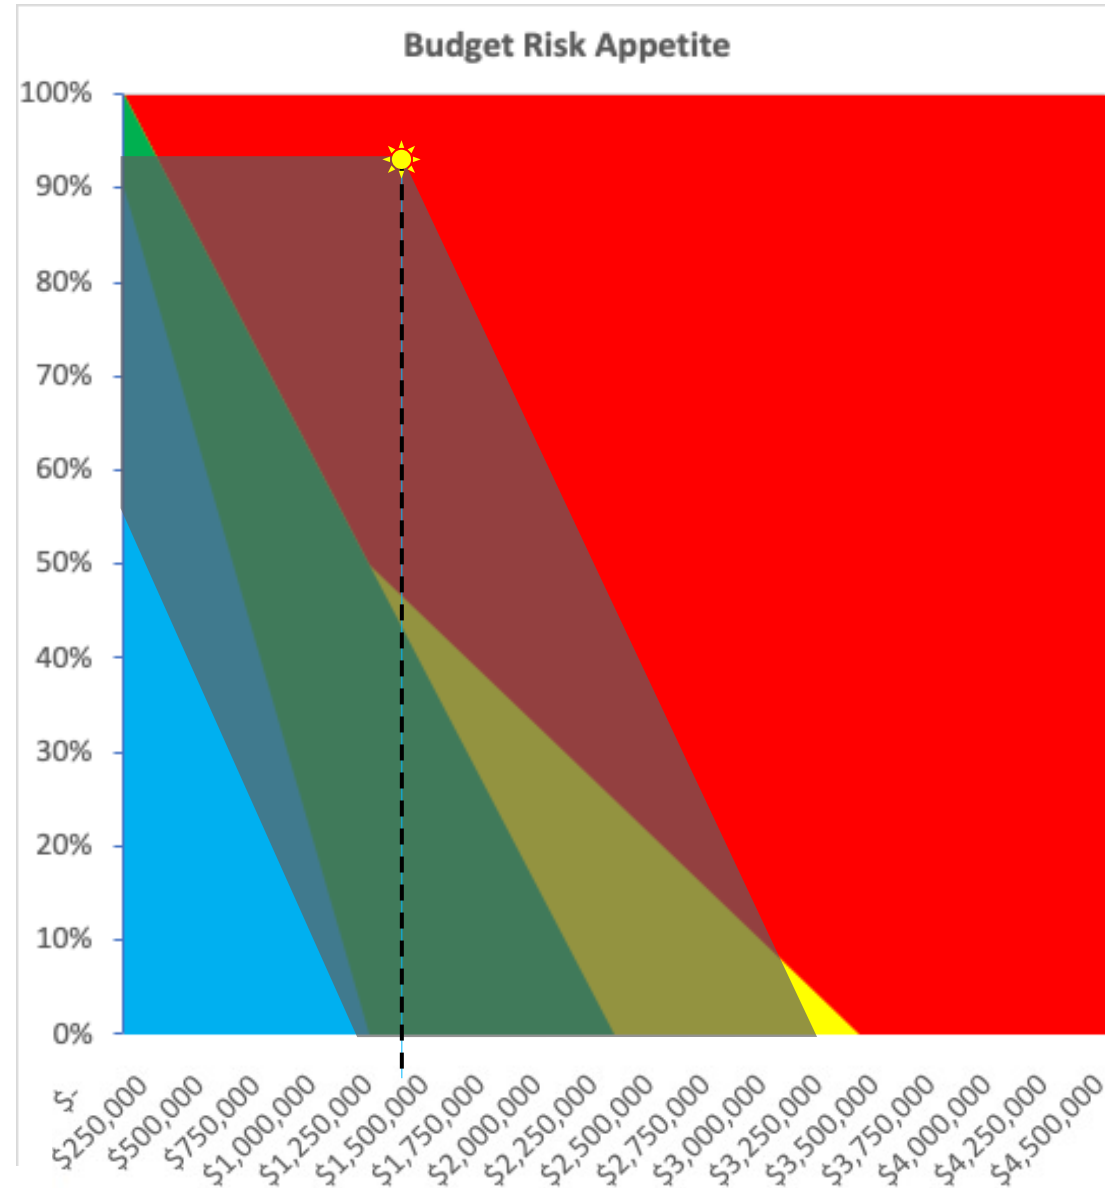

At a minimum, Risk Policy must clearly communicate the following:

- Rationale for managing risk
- Risk appetite and tolerance linked with organizational goals
- Risk governance
 - Roles and responsibilities
 - Conflict resolution
- How risk management is measured and reported
- Tolerance thresholds between projects and the Enterprise
